

Basic Information

Student Name: Oliver Hannaford-Day

Student id: 260270485

Hyperlink to locally hosted entry page: <http://localhost/index.php>

Hyperlink to internet entry page: <http://bexhd.com/uniCourse/>

Test user credentials: User name: admin, password: TestPassword123

Other users set up with same password: user123, Ujibay, Rob, Gordon

Source code link

Github upload: https://github.com/Ujibay/Aston-Uni-Unit_DO1IAD-Backend_development_Submission_point

Functionality:

- 1: View a list of all projects: projectList.php
- 2: View project details: projectDetails.php (Must be accessed via projectList.php on site)
- 3: Search projects by title or start date: search.php
- 4: Register as a new user: signup.php (Nav bar icon not visible when logged in)
- 5: Log in to the system: login.php (accessed via top of page login box)
- 6: Add a new project: addProject.php
- 7: Update their own projects: updateProject.php (accessed via projects.php on site)
- 8: Log out of the system: logout.php (Accessed via top of page logout link)

Security features

Password hashing using bcrypt

Login system with session id and user relocation if on unauthorised page

Authorisation using session id for limiting editing projects to own project

Form validation using validator library

SQL injection prevention by use of parameterised queries with placeholders running inside node.js.

Good coding practice

Should be shown by extensive code comments, camel case and obvious naming conventions.

Additional notes

The SQL creation is broken down into two files, DDL creates the database and DML populates it with data.
